

Work for collaboration day Friday 9th February year 11

Unit 3 Construction and design

Please see the attached document you need to work from it is important that you read this carefully as this will give you the assignment brief and the information you need to do to achieve.

The task is for you to complete three different designs of a school extension which will be for a lab with chemicals and a sports hall with storage.

This will be in the brief- the school will be eco friendly and sustainable please take this into consideration, the layout of the floor plan will play an important part here as this will decide how it will be laid out, again refer to brief.

Task 1- Create a mood board- find and research different extensions to a school building, find the pictures you like and then copy them on to a word sheet- attached a text box and explain why you chose the picture and why

Task 2- create and draw in 2d or 3d design of a school extension (refer to brief) incorporate the floor plan and annotate the drawing. This needs to be, to the brief so be mindful of what direction and where the storage will be, I need two different design concepts.

Task 3- Give a written or typed description of your extension listing with it all the key points of the drawing, make sure that you link this to the clients brief.

Please share work with me so that I can mark it, if you use a computer aided design this is ok, again share work with me, if you are drawing on paper, please remember to bring this into me after half-term.
